In 2022, ADPP Mozambique celebrated 40 years’ of existence. The history of ADPP is part of the Mozambican people’s struggle for a better life.

As the world is becoming increasingly divided and inequalities are growing day by day, this struggle has only intensified.

Natural disasters caused by Climate Change and Global Warming are increasing in strength and frequency, and Mozambique is one of the hardest hit countries, lying in the path of cyclones and prone to draughts and flooding. Every year devastating climate disasters are destroying the fragile infrastructure of the nation that has many challenges and leave people, who had little, with nothing.

ADPP works hand in hand with the Government and our partners to carry out projects and activities in all parts of the country by building on the local forces in the communities.

ADPP is a member of the Federation Humana People to People, a network of local associations, with whom we share the common approach of the members of the Federation in that all projects are based on a holistic people-to-people approach.

We work with the education of children and young people. As we are launching this report, we are celebrating 30 years of initiatives for training primary school teachers. These are teachers who dedicate their lives to educating future generations with care and professionalism, whether in the rural areas or in the townships, to ensure that children learn and grow into healthy and knowledgeable human beings.

As health is fundamental for all life, we work with projects dedicated to fighting HIV and TB, malaria and malnutrition.

Working with agricultural production, caring for the environment, and participating in the restoration of ecological systems are also part of our mission and activities, because we must preserve the health of our planet and leave a more balanced legacy for future generations.

ADPP will always be part of the efforts to build the future of the Mozambican nation and we are grateful that we are able to contribute to this goal.

“ADPP Mozambique is a strategic partner of our Province that since the dawn of National Independence has contributed to the formation of the New Man, in particular in the Field of Human Development, through Education. And as Samora Machel defined, Education is the basis for the people to take power.”

Message from the Governor of Maputo province, Julio José Parruque, on the occasion of the Celebrations of the 40 years of ADPP Mozambique:
ADPP KEY FIGURES 2022

We are committed to being part of the international community. The goals set out in the UN 2030 Agenda for Sustainable Development continue to guide our work and are embedded in everything we do.

Approximately
6,100,000 people reached with ADPP programs and projects

plus

2,700,000 people who bought ADPP Second Hand clothes

3,765,389 mosquito nets distributed benefitting 7,190,766 people

1,488,000 people reached in our Education programs

1,800,000 screened for TB

35,772 people received counselling and testing on HIV
2,123,768
People reached by HIV and TB health programs

1,500
users benefited from 5 boreholes installed, providing safe drinking water

29,016
people were diagnosed with all forms of TB, through community

3,200
producers received training in climate smart agricultural techniques in 64 established Demonstration Fields

4,389,000
kilos of clothes and shoes sold via 16 wholesale and 4 retail outlets

Approximately
42,000
direct and indirect beneficiaries from Agriculture programs

2,123,768
People reached by HIV and TB health programs

1,500
users benefited from 5 boreholes installed, providing safe drinking water

29,016
people were diagnosed with all forms of TB, through community

3,200
producers received training in climate smart agricultural techniques in 64 established Demonstration Fields

4,389,000
kilos of clothes and shoes sold via 16 wholesale and 4 retail outlets

Approximately
42,000
direct and indirect beneficiaries from Agriculture programs
QUALITY EDUCATION
During its 40 years of operations, ADPP Mozambique has worked to transform education at all levels, resulting in thousands of children, youth and adults being able to use their education to reach their goals, improve their lives, and contribute to building a peaceful and more prosperous society.

ADPP Mozambique took part in the Transform Education Summit and fully align ourselves with the words of the UN Secretary General.

Our pedagogical principles and approach to education creates a healthy environment for students to be drivers and navigators of their own training based on an inclusive and collective education.

Excerpts from the remarks of the UN Secretary-General António Guterres at the Transform Education Summit in September 2022:

“Every single person knows education transforms lives, economies and societies. But we also know we must transform education. Instead of being the great enabler, education is fast becoming a great divider. Some 70 percent of 10-year-olds in poor countries are unable to read a basic text. Either they are out of school, or in school but barely learning. Displaced people and students with disabilities face the highest obstacles of all.”

“Education systems are failing students and societies, by favoring rote learning and competition for grades. Too often, curricula are outdated and narrow. Education systems take little account of lifelong learning. And the education financing gap yawns wider than ever. We will not end this crisis by simply doing more of the same, faster or better. Now is the time to transform education systems.”

“Above all, quality education must support the development of the individual learner throughout his or her life. It must help people learn how to learn, with a focus on problem-solving and collaboration.”

“And it must help us learn to live and work together, and to understand ourselves and our responsibilities to each other and to our planet. At a time of rampant misinformation, climate denial and attacks on human rights, we need education systems that distinguish fact from conspiracy, instill respect for science, and celebrate humanity in all its diversity.”
EDUCATION MAP AND NUMBERS

Students in ADPP Schools in 2022, including distance learning at ISET- One World

4,653
EPF Graduated teachers in 2022

955
EPF Graduated teachers since 1993

550
Disabled childrens reached by inclusive education programs

The Pedagogical and training principles practiced at the ADPP Education Institutions and programs are illustrated here. These principles are inspired by the pedagogical principles used in schools and programs of other members of the Federation Humana People to People.
Education is the basis for the development of society and in preparing new generations for a more promising future. The first activities that ADPP carried out in the area of education in Mozambique were literacy campaigns in local cooperatives in the “Zonas Verdes”, or Green Zones, in Maputo in the early 1980s. Today our work in education includes 17 institutions from primary to higher education. ADPP works in coordination with the Ministry of Education and Human Development and other relevant ministries. The curricula used are approved by the respective Ministries and complemented by ADPP’s own pedagogical principles and programs.

**Schools for the Teachers of the Future (EPF)**

Since 1993 ADPP has trained 24,342 primary school teachers at 11 EPFs across the country. To provide students with holistic training encompassing all levels of development from personal and professional to social and cultural aspects, the EPFs have developed a demanding, three-year teacher training program that effectively combines both theory and practice and ensures a wide range of learning experiences in an active and encouraging learning environment. Students learn not only about their own country, but also about the world in which they live and how they as teachers can be part of changing this world.

The students that graduate as primary school teachers are passionate educators and capable of leading community development initiatives in the rural areas in which most of them work. The EPF graduates are known to be motivated in their work, skilled in using the latest pedagogical methodologies, and dedicated to the holistic development of the children they teach.
Graduated Teachers’ Network
The Graduated Teachers’ Network engages trained teachers in the development of primary schools. This means that each teacher who graduates from the EPF becomes more active and innovative in improving the quality of education of children in primary schools. The Network provides opportunities to exchange experiences at the school, district and provincial levels and equip the teachers with the tools to develop their mission more effectively. Through the Network, the teachers have a forum to discuss teaching methods and how to engage parents in life at the schools, which has resulted in many new initiatives such as clubs for girls, reading clubs, school gardens, school feeding, construction of classrooms, community action, and much more.

Higher Institute of Education and Technology (ISET) – One World
The objective of ISET – One World is to train professionals in the area of Science of Education. The name “One World” reflects the global humanistic vision that this institution cultivates in its students by offering perspectives and solutions to human development in their future careers. The Institute offers bachelor degree courses in Pedagogy, Environmental Education and Community Development, and a Master’s degree in Pedagogy and Didactics.

Knowing and experiencing the challenges faced by young people in today’s world, we deliver vocational and academic training combined with sustainable life skills in our vocational schools and short-term training courses that create opportunities for young people to progress with their dreams.
It is located in a rural environment in the middle of a natural landscape with excellent infrastructure and teaching conditions that facilitate the concentration of the students on the learning process. The courses are also offered through distance learning, both nationally and internationally.

**Polytechnic Institutes**
The Polytechnic Institutes provide opportunities for young people to access the employment market or create self-employment through a holistic training program that equips them with both technical and life skills. The Institutes provide boarding facilities and the education program includes activities that educate students to be proactive and to improve their self-esteem as well as their problem-solving capabilities as key skills for their future careers. The Institutes provide 3-year medium courses in agriculture, construction and hospitality and also run short courses for young people in the local area with skills training that incorporates entrepreneurship.

**Community Schools**
ADPP pays special attention to the education of children in difficult situations and runs 3 primary and secondary schools for orphans and vulnerable children. These schools offer complementary programs in social orientation and life skills.
Disability constitutes a serious limitation on the affected population’s access to basic social services including education in Mozambique. Approximately 2.7% of the Mozambican population are people with some type of disability and two out of three children with disabilities are out of school. ADPP identified itself with this cause and since 1999 has introduced inclusive education methodologies where it has offered disabled young people the opportunity to be trained as teachers, initially at its Teacher Training College (EPF) in Nhamatanda. Currently, through various projects, ADPP supports teachers and school managers in improving their skills in working with children with disabilities. These activities are carried out in close collaboration with local authorities, governments and organizations working with people with disabilities.

Inclusive Education at the ADPP Teacher Training Colleges

At the two EPFs in Nhamatanda and Chimoio, 427 trainees have benefited from new knowledge about inclusive education, having learnt to use Braille for reading and Sign Language. In the participating schools, the infrastructure was adapted with ramps and handrails added to enable access for both wheelchair users and other people with disabilities. In addition to disseminating knowledge on inclusive education to trainees, the EPFs held workshops
The Determination that Overcame Limitations

Dásio Rafael is an inspiring young man who, along with his brother who also lives with disability, faced challenges early on due to his physical condition. Even so, he did not give up on his dreams and found new hope through the Mapunziro project, which helped him gain access to education.

“My brother and I suffered a lot of bullying from our peers because of our disability, which led us to drop out of school. It was then that a visit from the focal point of the Mapunziro project changed our lives. He made my parents aware of the importance of education and sensitized our classmates not to bully anymore. Through the project, I received school supplies that allowed me to go back to school with confidence and make new friends. Today, besides studying, I provide services to repair domestic electronic equipment in my community, which helps me contribute financially at home. My big dream is to become an electronic engineer and I intend to study hard to achieve this goal.”

with government entities and organizations of people with disabilities to further joint planning and carry out activities. They also held open events on Saturdays with local communities to raise their awareness of inclusive education. In support of surrounding primary school teachers, the EPFs have established 2 Resource Centers for Inclusive Education.

Creating an Attractive Environment for Students with Disabilities

With its interventions in inclusive education, ADPP has reached 47,090 children in 107 primary schools in the provinces of Manica, Sofala and Zambézia, and particularly 550 children with disabilities. In collaboration with local organizations of people living with disabilities that helped in the identification and mobilization of out of school children, 140 students living with disabilities were enrolled and today they are exercising their right to education. As a way of encouraging children not to feel excluded, accessibility conditions were created in 2 of the reference schools by building ramps and handrails in classrooms and bathrooms. More than 577 primary school teachers and managers benefited from training on a range of inclusive teaching methodologies to ensure that no student with special needs was left behind.
Believing that all children have the right to an education, we promote and deliver inclusive education through schools and community engagement with trained teachers and activists dedicated to transforming the lives of children in vulnerable conditions.
Carmelita Rita Namashulua
Minister of Education and Human Development

During the Celebration of the fortieth anniversary of the ADPP, the Minister of Education and Human Development, Carmelita Namashulua, welcomed the organization for its contribution lasting over 40 years to the development of the country. This includes areas of great impact for the well-being of the population, namely Quality Education, Health, Sustainable Agriculture, and the Environment. These are her words:

“On behalf of the Government and the Ministry I represent, we wish to express our gratitude for the interventions of the ADPP not only in teacher training and its performance in pre-primary, secondary, technical and higher education but also in inclusive education, women’s empowerment, citizenship education, strengthening reading and writing, school feeding and all cross-cutting areas linked to education and human development.”
Good health is one of the conditions for personal growth and crucial for a productive life. Health care and services are often not available for everyone and do not address peoples’ individual needs. ADPP carries out health programs that enable people to become organized, to contribute to solutions, and take their health into their own hands. ADPP thereby contributes to improving health and wellbeing by addressing a wide spectrum of diseases such as HIV, TB, Malaria and malnutrition.

“We support people and communities to take health into their own hands”
LIST OF PROJECTS - HEALTH

Transform Nutrition
Main Partner: USAID
Partners: Humana People to People member associations: Italy, Slovenia, HPP Foundation
Implementing partner: GAIN, h2n, VIAMO and UNILURIO
Location: Nampula province

Accelerating and Strengthening the Quality of Malaria Control Interventions in Mozambique
Main Partner: World Vision with funding from Global Fund
Partners: Humana People to People member associations: Finland, Italy, Austria, Estonia, Norway, Portugal, Spain
Location: Nampula and Niassa provinces

Integrated HIV Prevention and Health Services for Key and Priority Populations (HIS/KP-PASSOS)
Main Partner: FHI360 with funding from USAID
Location: Gaza and Zambezia provinces

Together We Stay On
Main Partner: AIDSFONDS
Partners: Humana People to People member associations: Austria
Implementing partner: CIOB, KUYAKANA and OMES
Location: Manica province

Kushinga
Main Partner: AIDSFONDS with funding from ViV Healthcare
Partners: Humana People to People member associations: Austria
Location: Manica province

OnelImpact Mozambique - Community Lead Monitoring
Main Partner: Stop TB Partnership with funding from UNOPS
Location: Zambezia province

HIV, TB and Advocacy Activities to Guarantee the Human Rights of Girls and Women, including GBV, in Southern Mozambique, Project VIVA+
Main Partner: FDC with funding from Global Fund
Partners: Humana People to People member associations: Lithuania, Spain, USA(Planet Aid)
Location: Maputo province and Maputo city

Support Local Organizations in the Implementation and Expansion of HIV/AIDS Care and Treatment Programs (HOPE)
Main Partner: Ariel Glaser with funding from CDC
Partners: Humana People to People member associations: Spain
Location: Maputo and Cabo Delgado provinces

Mozambique Local TB Response
Main Partner: USAID
Partners: Humana People to People member associations: Lithuania, USA (Planet Aid), HPP Foundation, Spain
Implementing partner: FHI360, ComuSanas, Kupulumussana and DIMAGI
Location: Nampula, Zambezia, Sofala, Tete provinces

COVida “Juntos pela Crianças”- DREAMS
Main Partner: FHI360 with funding from USAID
Partners: Humana People to People member association: Norway
Location: Maputo province

Okahiheira (Taking Care)
Main Partner: USAID TIFA (TB Implementation Framework Agreement) & JSI
Location: Nampula Province

OnelImpact Mozambique - Community Lead Monitoring
Main Partner: GIZ – BACKUP Health
Location: Maputo Province

TRACK HOPE Maputo
Main Partner: TRACK
Location: Maputo Province

Strengthening the National Response to HIV and TB in Mozambique - TB Matola
Main Partner: CCS (Centro de Colaboração em Saúde)
Other partners: Lituania
Location: Maputo Province
Every 20 minutes, a young woman in Mozambique between the ages of 15 and 24 is infected with HIV! HIV prevention is critical! We put emphasis on HIV prevention and community services with access to counselling, testing and support groups.

“Only people can liberate themselves from the Epidemic”

ADPP Mozambique has invested in contributing to 95–95–95 HIV global targets during 2022. In this regard, ADPP has carried out 7 projects in 2022 designed to mobilize and enable more people to find out their HIV status through lay counselor-led community-based HIV testing and promotion of HIV self-testing, along with supporting treatment initiation, ART retention, and ensuring viral load suppression.

ADPP has reached out to and supported those at high risk, such as sexual partners of people living with HIV, sex-workers and their children, adolescents and young men, and women aged 9–24 years through HIV literacy, life skills, counselling and testing services carried out by activists and lay counsellors with the heart and mind to support others. To stay on lifelong antiretroviral treatment (ART) is a big challenge when people are not supported by their family and others.

Treatment adherence and retention has been shown to improve with peer-to-peer education and help for people living with HIV to take part in the support groups that are a part of many of ADPPs HIV prevention projects.
22,397 sex workers received support peer education, counselling, testing and economic strengthening. HOPE Maputo & Cabo Delgado supported 25,341 persons to get to know their HIV status and to start on treatment. In Stay On, 3,160 PLHIV improved retention by being part of a support group. In VIVA+, 109,600 adolescent girls and boys were reached with HIV literacy and life skills. 109,600 adolescent girls and boys were reached with HIV literacy and life skills.

Algy Abdula Cassamo from ADPP’s Local TB Response project funded by USAID presented an abstract at the International AIDS Conference in Canada called: “DOTS PLUS: a promising approach to increasing adherence to tuberculosis, drug resistant tuberculosis and antiretroviral HIV treatment in Mozambique”. 
Mozambique is a high TB burden country. Prevention, early detection and treatment are key to changing this reality. For 15 years, we have worked with the government and partners to mobilize communities using people-to-people approaches to take control and ownership to work towards TB elimination.

ADPP carried out and led TB interventions in 51 districts in Nampula, Zambezia, Sofala, Tete, and Maputo provinces. Ensuring all people with TB are found, diagnosed, and successfully treated requires a holistic approach. Community education and awareness about seeking health services early, combined with community contact screening and active case finding in high-incidence areas, has resulted in the discovery of many of the missing TB cases. As a result, community activists have been able to access over 50% of all TB cases notified in the targeted districts.

Completing TB treatment consistently over 6 months or more without skipping a single dose can be difficult. To ensure successful treatment outcomes, ADPP provides ‘Community DOTS’ (Direct Observed Treatment) to ensure support for almost 42,000 people on TB treatment.

Along with DOTS Plus comprehensive support that is especially focused on people with Multi-Drug Resistant TB. In addition, peer support and cash transfer support for people with TB MDR has been fundamental to helping people complete treatment and at the same time overcoming stigma and economic constraints.

At the end of 2022, ADPP made special efforts to improve childhood TB prevention by reaching out to peripheral population groups in their localities through nurses equipped to conduct clinical evaluation in homes. During a 2 months period 1,225 children and adults were screened and 741 children were found eligible for starting the preventive TB treatment – a promising result.
ONEIMPACT COMMUNITY LED MONITORING

It starts with people, not the disease! People affected by TB face many barriers to being tested, treated, and cared for. Without addressing and resolving these obstacles, we will not achieve our targets to gain control and eventually eliminate TB.
To address this challenge, we are supporting TB affected communities to obtain access to more knowledge and to take the initiative in improving and resolving barriers related to TB diagnostic, care, and treatment through the Community-Led Monitoring OneImpact approach. In 2022, we covered two districts of Zambezia and four districts of Maputo Province.

OneImpact CLM starts with people, who are empowered with a voice and can participate in the fight against TB. This is a community engagement process that serves human rights, gender equality and patient rights awareness. Through the OneImpact tool, those affected by TB used a phone that enabled 4,600 people to access more information about TB and Human Rights while connecting with other people affected and receiving alerts on barriers faced. Real time data monitored on the dashboard facilitated immediate responses organized at a local level. Health care workers from 61 health facilities and 330 community leaders and other community actors were involved in responding to overcome the barriers, with the overall aim being to reduce stigma, discrimination and human rights violations while offering improved and humanized health services.

"OneImpact CLM is being very useful. We have had difficulties in approaching the patients to understand the causes of problems such as abandonment or poor adherence to treatment. With OneImpact we get to understand what is happening with the patient when he does not show up at the health facility and we can now help to find a way to support him until finishes the treatment".

Helena Ventura, Director and Head of National TB Program at Delua Health Centre, Milange

"We have experience with OneImpact for about two years. For us from the DPS the experience is very good, because the information we get from OneImpact we can’t get through our information system".

Atanásio Jantar, National TB Program Provincial TB Supervisor at the Provincial Health Department – Quelimane, Zambézia Province
Although the number of deaths from malaria has gradually decreased since 2012, malaria remains the leading cause of child mortality in Mozambique, with 11.3 million cases recorded in 2020. Malaria deaths are being ignored and in order to reduce and eliminate them, more investment is needed for malaria prevention. We work with community structures and schools to raise awareness, take preventive action, and distribute bed nets.

Understanding and practicing malaria prevention, obtaining access to mosquito nets, and awareness of the correct use of such methods are indispensable conditions for ensuring people are prevented from getting malaria. ADPP carries out malaria prevention activities in Niassa and Nampula provinces. People in the communities learn about malaria prevention, transmission, signs and symptoms, as well as the importance of early diagnosis and treatment.

This information is disseminated by community leaders, Community Health Committees, teachers, students, and Community Health workers through sensitization campaigns, home visits, and community radio programs designed to support people in adopting preventive measures in their households. People can access mosquito nets treated with long-lasting insecticide through distribution by the project along with the local government in the communities. This strong community involvement and the many people reached with key messages has resulted in a snowball effect where more and more people are now teaching each other, which in turn has increased demand for early malaria testing and treatment.
“The messages transmitted by the volunteers are of great value. For a long time, I didn’t know much about malaria and there were people who explained that you get malaria from getting wet from rain, but thanks to the messages from the volunteers, I now know that rain doesn’t cause malaria and that the parasite in the mosquito does.”

**Maria Jose,** from Mecan-helas District

Now I understand that not all diseases are cured by traditional healers. I have seen many people dying of malaria and we didn’t know why as we always blamed the spirits of our ancestors, but today I know the signs and symptoms of malaria and I disseminate the message to other people in the community, so we can be free from the disease...

**Fatima Jorge,** from Cuamba District
Good nutrition is a fundamental right for every person. In Mozambique, nearly half of all children live with chronic malnutrition, which has serious consequences for the young generation. By giving young women and girls access to more nutrition and sanitation education, cooking skills, and motivation for positive changes in nutrition practices, the malnutrition cycle can be broken.
Transform Nutrition assists government and community stakeholders in developing their capacity to plan and manage multisectoral nutrition, sanitation, and hygiene programming. Efforts focus on improving the nutritional status of pregnant and lactating women, adolescent girls, and children less than two years of age, in order to reduce stunting rates in Nampula. A holistic approach is applied with community members’ engagement, nutrition education, and community-level services.

The engagement of community leaders and community health committees has been critical in influencing a positive change in eating habits and improving the nutritional status of the target population. Their engagement has contributed to a greater participation in nutrition sites where Community Health Workers and volunteers have provided nutrition counselling and community services and support for the Girls’ Clubs and Nutrition Group’s activities.

The Girls Clubs and Nutrition groups have served as a forum for learning more about nutrition as well as different skills to be applied at home. For example, 51,393 home gardens have been established, 54,147 households have started animal husbandry for egg consumption and for sale, and 273 communities have constructed 58,584 latrines and were certified Open Defecation Free.

This increased understanding about nutrition starts to have an effect where women, men and adolescents have applied what they have learned to diversifying their food intake, improving sanitary conditions, and practicing good childcare. The Savings and Loans groups have rolled out an excellent strategy to empower the functions of the Community Health Committees and thereby benefit families. In total, 511 saving groups have been formed.
Our actions are coordinated with local farmers and other food producers and their communities. We build on their knowledge to contribute with organizational capacity and concept packages to support increased production and organize farmers’ integration into agro value chains.
Preparing for the future: Food security and livelihoods under a changing climate

Agriculture is the backbone of Mozambique’s economy. 3.2 million smallholder farmers account for approximately 95% of the agriculture production. 70% of the population depend on climate-sensitive agricultural production for food and livelihoods, but increased frequency and intensity of storms, droughts and floods pose pressure on agricultural income undermining 25% of the country’s economy, 70% of livelihoods, as well as the food and nutrition security of the whole country.

There is an urgent need to increase direct investment in smallholder farmers, so that they can escape cycles of poverty, invest in their farms, diversify their production, adapt to climate change and increase sustainable food production.

Building capacity through the Farmers’ Club concept

ADPPs projects in Sustainable Agriculture and Environment is based on a concept called “Farmers’ Club” referring to all food producers in agriculture, animal production, fishery, etc. The creation of clubs starts with the farmers and producers themselves and it is the crucial first step in the journey from subsistence to sustainable commercial farming and food production.

The potential of the smallholder farmers holds the key to sustainable solutions

Global farming policies and food systems are built on industrialised agriculture based on the use of chemical fertilizers and pesticides, where food has become a commodity traded on the global market has to change. A true shift to localised food systems that produce food for people under local control is needed, giving value to the people that produce the food.

Knowledge and skills adapted to local conditions must spread among farmers, and ways to work with nature, and not against it, must be revitalised from former practices and innovation to respond to the challenges of today. Supporting and empowering organised smallholder farmers, to fully participate in establishing sustainable food systems locally, is one of the main efforts to improve food security, and reduce hunger and poverty in the country. Thus, smallholder farmers need support on all levels.

Investing in smallholder farmers organisation

By investing in smallholder farmers organisation, knowledge and new farming methods is proving to be a new way to seize profitable market opportunities. Organized smallholders are able to access more information, reduce costs, and reap the rewards that come from selling in bulk. Investing in inclusive value chains is an approach which supports access to markets, reducing costs and improving access to inputs which in turn can be part of breaking down barriers for sustainable food and nutrition security in Mozambique.

- Tree nursery
- Firewood saving stove
- Rope pump well
- Young farmers club
- Clubs & Association cooperative
- Saving and credit groups

Value Chain

- Government Extension Service
- Input Suppliers for seeds, tools & spare parts
- Bank services
- Markets in the cities
- Contract with agribusiness
Smallholder farmers and their families are at the centre of sustainable farming activities. The farmers are organized in clubs of 50 persons, with minimum 50% women. Through the Farmers’ Club structure, we focus on building capacity and strengthening farmers’ organizations by aiding the use of quality agricultural inputs, climate smart agriculture techniques, and access to regular and quality extension services to enhance sustainable agricultural productivity and increase resilience.

The Farmers’ Club concept offers an opportunity for club members to meet, learn and support one another in solving the challenges that confront the production rates and livelihood.

Training takes place in the common demonstration field of the club and in the form of field visits to individual farmers and their fields and by visits to other farmers to enhance learning by exchange of experiences. With the systematic visits to the clubs from farming instructors, farmers are trained in climate smart agriculture practices, introduced to climate tolerant seeds to reduce the incidences of crop loss, helped to intensify vegetable production and adaption of environment friendly irrigation practices, trained about post-harvest losses, management and storage technologies and facilitation of the creation of saving and credit groups, resulting in start of several small business initiatives and services.

The program encourages productive and innovative farmers with incentives, with particular focus on women - importantly such farmers become lead farmers via their examples they set for other club members to follow.
LIST OF PROJECTS
SUSTAINABLE AGRICULTURE & ENVIRONMENT

“Ecofish – Fisher’s Club”
Promotion of sustainable small-scale fisheries in Cahora-Bassa and Magoé Districts
Main Partner: European Commission (EU) E€OFISH Program
Partners: Humana People to People member associations: Lithuania
Location: Tete province

“Producers Club”
Supporting greater Socio- Economic Development and Recovery in Cabo Delgado (RCD)
Main Partner: USAID
Partners: Humana People to People member associations: Finland
Location: Cabo Delgado province

“Blue Future”
Building a Blue Future for Ecosystems and People on the East African Coast
Main Partner: WCS with funding from Blue Action Fund (BAF)
Partners: Oceans 5, Humana People to People Associationss: Spain
Implementing partner: AMA, DCB-UEM, ProAzul, BIOFUND
Location: Nampula province

“Youth in Construction of Peace”
Inclusive Economic Strengthening Program for Component 2, Activities of the Northern Crisis Recovery Project (NCRP)
Main Partner: United Nations Office for Project Services, UNOPS
Location: Cabo Delgado province

Itoculo Cashew and Rural Development Centre
Partner: Mozambique Almond Institute (IAM), Humana People to People member association: Austria
Location: Nampula province

Changalane Women’s Clean Cooking Stove - Pilot II
Main Partner: ExxonMobil Mocambique Limitada (EMML)
Implementing partner: Mozambique Renewables
Location: Maputo province
An estimated 334,000 people in Mozambique rely on small-scale fisheries for their livelihoods. Fisheries continue to face challenges such as overfishing, illegal fishing, and geophysical changes associated with climate change.

Fishing communities in the areas supported by the project had limited access to fishing equipment and inputs along with limited market infrastructure for the sale of fish due to extremely bad access that is typical of the area. The same communities also had inadequate access to improved drinking water resources and almost non-existent sanitation facilities.

The Fisher’s Club program promotes the sustainability of small-scale fishers and their families in 10 fishing communities along the
In 2022, the project achieved the following results:

Cahora Bassa Hydropower reservoir in the 2 districts. The program builds on a combination of both already organized fishers and fishers wishing to organize and join the program.

The project has offered guidance on the use of sustainable fishing methods and aided the integration of the fisher’s associations into the fish value chain, thereby enabling them to increase sales and income. With its holistic approach and a program Led by the communities, the Fisher’s Club concept is demonstrating a shift towards sustainable fishing with increased sales and income and significant general improvements regarding access to water, agriculture production, nutrition and health among the communities.

The 10 fishers’ clubs organized and strengthened on sustainable fishing techniques, financial literacy, and management, targeting a total of 531 fishers (354 males and 177 females). At the moment all the clubs are running as registered associations, and have established 2 cooperatives.

Fishers average annual income increased with over 100% over 2 years

Successful creation of savings and credit groups resulted in start of several small businesses and services, benefiting 531 fishers

One out of two fish cleaning and sales markets is under construction

A total of 7 Fishing Community Councils in the 2 districts are revitalized and restructured in terms of functionalities, member documentation and work plans

Five (5) boreholes were installed, each with capacity of providing safe drinking water to 300 users, totaling coverage of 1500 users

270 fishers’ families have adopted best agricultural practices improving productivity, diet, and diversification in the source of income from sale of both fish, vegetables and services
Cashew production is the main source of income for close to 1.4 million rural producers in Mozambique. As one of the few reliable cash crops that farmers can grow, cashew production is the economic backbone of thousands of communities throughout the country. With proper care, a tree with a lifespan up to 40-50 years can yield 11 kgs of raw nuts per year. Cashew production is a business opportunity for smallholder farmers that lasts for generations.

The Itoculo Cashew and Rural Development Centre is located in Monapo district,楠普拉 province. The Center consists of a rural training center, a cashew-processing unit, a cashew juice factory, and a plantation with 14,000 cashew trees.

**Improving productivity and income of smallholder cashew farmers**

The Center trains local producers in the area to increase their production of cashew and support producers in organizing themselves to link into the value chain of selling processed cashew nuts in the local market for increased income.
In the local communities of Changalane in Namaacha district, men, women and children spend hours fetching firewood to prepare meals on primitive cooking stoves in poorly ventilated houses. The increased demand for fuel from wood and charcoal also results in pressure on local natural resources. The consequences are visible, as the surrounding biodiversity of the urban and densely populated areas are being degraded. This project is a pilot, testing an impactful solution to enable millions of families in Mozambique to switch from the use of fossil fuels, firewood and charcoal to cleaner options such as biofuel and solar power. The Clean Cooking Stove is a solution for increasing affordable energy security for communities in both rural and urban areas, with a low-cost fuel source that is healthy for people and prevents ongoing deforestation.

100 women have shifted to use the clean cooking stoves

100 stoves with accessories (Solar panel, LED lamp, and a smartphone) distributed

Uploading the data indicating the carbon emissions avoided with the use of the stove and the smartphone
“PRODUCERS’ CLUB”
SUPPORTING GREATER SOCIO-ECONOMIC DEVELOPMENT AND RECOVERY IN CABO DELGADO

The project addresses the major socio-economic challenges faced by Internally Displaced People (IDPs) who lost their livelihoods and were forced to depend on food aid to meet their basic family needs in Cabo Delgado province. This is achieved through a carefully designed program, where IDPs and Host communities are motivated to organize in Producers’ Clubs.

During the first year of the project, 3,200 people were organized in 64 clubs and are now actively involved in the program with an emphasis on the following 3 main components that are designed to support the overall goal of recovery and socio-economic strengthening:

- Gender-responsive recovery for 21,000 people and their families from conflicts and natural disasters with an emphasis on food security;
- Enhanced youth and women’s capacity for income generation activities through strengthening economic pathways, particularly for youth through an emphasis on agricultural value chains and improved youth training and employment opportunities benefitting 600 youths;
- Enhanced capacity for positive leadership among 500 women and youths.

- 3,200 people in 64 Producer Clubs with established demonstration fields, trained in sustainable agriculture
- 771 firewood-saving stoves have been produced freeing time for women and girls from in search of firewood
- 500 youths’ trained in life and vocational skills and linking them to opportunities in formal and informal economies
- 72 young girls and boys equipped with radio journalism skills - now producers of community videos and radio programs about sustainable farming and messages to influence positive behavior within the communities
Cabo Delgado faces socio economic challenges which include a large youth population with poor access to education and employment, especially among young women. Although there are some formal job opportunities from the extractive industry, most Cabo Delgado youth lack appropriate job skills and educational qualifications.

The NCRP project is part of several new Government programs being undertaken in Cabo Delgado province with funding and technical assistance from international partners.

ADPP is using the experience of working with youth in various areas of the country to support youth in Metuge District in Cabo Delgado. It does this by providing training of skills and promote opportunities for youth to improve their livelihoods and enhance better integration in the market place as well as promoting social economic development in vulnerable communities.

The project started in the second semester of 2022 and has specific goals to train specific numbers of internally displaced youth that are registered in camps and host communities.

These goals cover different skills and coaching programs in combination with general courses, sports, cultural, awareness raising, and other positive youth outlook programs.

**During the project period of 18 months the goals are the following:**

- 957 Youths trained in professional/vocational skills.
- 824 Youths registered in 6 months Professional Internship Programme.
- 1472 Youths trained in small business management/life skills.
- 981 Young people who received toolkits for self-employment.
- 74 Out-of-school girls enrolled in tailored skills training.
Ecosystem-based Adaptation is a nature-based solution that harnesses biodiversity and ecosystem services to reduce vulnerability and build resilience against climate change.

“Futuro Azul”
The preparation of the project has taken place over years, where a consortium of 6 organizations specialized in conservation and working in collaboration with the Government of Mozambique is supporting the country in its efforts to achieve its marine conservation targets. Mozambique should have 30% of their coastal areas legally established as Marine Protected Areas by 2030. Currently, Mozambique has only 2.1% of these areas under protected status.

Marine Protected Area
The project aims to establish the sustainable use of a new Marine Protected Area along the coastline of the districts of Memba and Mossuril in Nampula province. The area will cover 1,000 km² with a network of well operated community managed fishing areas. The most vulnerable communities along the coastal area will be supported through the project to adopt diversified livelihood opportunities and develop improved value chains.

The project will also restore or rehabilitate an area of 150 hectares with 1 million mangroves and plant 50,000 native trees.

ADPP as a key partner in working with and among the communities
With a lack of opportunities, the local communities are very poor and rely mostly on subsistence agriculture and fishing. To secure

Safeguarding ecosystems via Ecosystem-based Adaptation in turn also safeguards local communities.
successful results, there is a critical need to support local communities in developing alternative livelihoods.

ADPP is one of the key partners in the project, with the specific role to work with the communities on the management of the environment in priority ecosystems. The goal is not only to reduce the pressure on these ecosystems, but also to support sustained, inclusive and economic development to improve the local communities' livelihoods.

Livelihood Clubs
Through the Livelihood Clubs, the community members are introduced to the program and its objectives and are offered a full package for new learning, awareness support, and plans for the development of alternative livelihoods. These include Ecosystem-based Agriculture, which focuses on enhancing horticulture, fish value chains, and the development of new value chains such as the production of honey and pineapple, native tree planting for firewood and construction, ecotourism, and local services.

Initial result from the project in 2022
- Recruitment of staff, establishment of an office and launching of the project.
- Final assessment and creation of 33 livelihood clubs
- Specialized training by lead partners experts in Environmental and Social Management Systems and Natural Resource Governance Tracking.
- Preparation of a Socio-Economic Baseline Study, including gender assessment.
- 6 youths from local communities selected for a 3-year scholarship program in sustainable agriculture.
ADPP second-hand clothes project as a social enterprise

There are multiple reasons to feel good about buying second-hand clothes from ADPP Vestuário (wholesale) and Vestuário+ (retail sale).

- It is affordable for all to buy;
- It is good for the environment;
- It creates jobs: 178 permanent employees including sorters, quality controllers, administration and account staff, outlet managers, cashers and sellers;
- It provides self-employment for thousands of traders, menders, tailors, transporters and others throughout the country;
- It generates funds in support of development projects;
- It can be donated to give relief for people who have lost their livelihoods and belongings.

Affordable clothes for all

For over 30 years, ADPP has been a stable supplier of second-hand clothes to the Mozambican market. Every year millions in rural, semi urban and urban areas have been supplied with good quality clothes and shoes at very affordable prices.

Generator of surplus

The second-hand clothes project is run as a social enterprise and is generating a surplus, thereby enabling ADPP to secure a stable income for its permanent projects with a primary focus on the area of education.

Good for the environment

Another additional and important benefit is that a well-organized supply system for second-hand clothes contributes to mitigating the effects of climate change by giving produced clothes a longer life span through re-use.
RESULTS FROM ADPP VESTUÁRIO

WHOLE SALES IN 2022:

4,050 tons of clothes and shoes sold

16 sales outlets

178 permanent jobs

supporting

2,200 permanent wholesale customers and small traders

creating

selling the clothes in markets across the country and supplying clothes to millions of Mozambicans

RETAIL SHOPS IN 2022, ADPP VESTUÁRIO+

In 2022, ADPP operated 4 retail shops for sales of second-hand clothes and shoes in response to increasing demand from the growing population in urban and semi urban areas. The 4 retail shops situated in Maputo City and Maputo Province have been well received by an increasing customer base, who are happy to buy unique and affordable clothing items in well-organized shops.
Clothes are sold at sales points to small market vendors in bales, generating self-employment in communities and in Vestuario+ stores in the form of retail.

The funds raised are used by ADPP Mozambique to benefit thousands of people in the areas of education, agriculture and environment, health and humanitarian aid.

WHAT HAPPENS TO THE CLOTHES UNTIL REACHES YOU?
Clothes are sold at sales points to small market vendors in bales, generating self-employment in communities and in Vestuario+ stores in the form of retail.

The funds raised are used by ADPP Mozambique to benefit thousands of people in the areas of education, agriculture and environment, health and humanitarian aid.

At the Beira Sorting Center, the clothes are sorted, separated into categories and baled for maximum use and sent to the various points of sale throughout the country.
HUMANA PEOPLE TO PEOPLE

The Humana People to People Headquarters in Shamva, Zimbabwe.
We are members of the Federation for Associations connected to the International Humana People to People Movement. It comprises 29 independent national member associations.

Our common agenda is to protect the planet, build communities and support people by connecting them with others in transformative programs, unleashing their potential for positive change and action.

The Federation supports the members in delivering critical on-the-ground programs across Africa, Asia, Europe, North America and South America. This support includes program development, project management and operations, financial management support and help to promote our common agenda and gain influence through important relationships and partnerships.

The activities of the Humana People to People movement are aligned with the UN 2030 Agenda. Together with the people in the communities and our numerous partners, we continue to stand by countries as they strive to meet the Sustainable Development Goals, creating lasting positive change in the process.

In 2022, members and associates of the Federation Humana People to People worked in 46 countries at five continents. Together, we reached out to 16,3 million people through activities within health, education, community development, agriculture and environment.
ACCOUNTABILITY AND TRANSPARENCY

Accountability and transparency continue to play a major role in international development, with stakeholders expecting visibility in the use of public funds.

ADPP Mozambique is committed to operating within this framework to ensure greater accountability between its partners and donor support recipients, and also that its strategic frameworks are open to public scrutiny.

SOURCES OF FUNDING
In 2022, ADPP Mozambique invested 36,2 million USD in education, health and agriculture projects in Mozambique.

Our main source of funding has been from partnerships, where ADPP Mozambique concludes agreements with the Mozambican government, other governments, foundations, companies, organisations and multilateral and global funding mechanisms for specific programs, projects and activities.

Programs and projects implemented by ADPP Mozambique are also financed with funds generated by “ADPP Second Hand”. ADPP’s objective through the sale of second hand clothing is to create and maintain stability in its economy, enabling it to invest in new developmental programs, establishing new partnerships and when needed contribute with co-financing of programs and projects.

ADMINISTRATION AND AUDIT STANDARDS
ADPP Mozambique is governed by a Board of Directors, elected by members at the General Assembly, which is the highest authority of the association.

ADPP Mozambique has policies, guidelines and internal controls that live up to international best practice to ensure that funds received and generated are spent for their intended purpose only.

As a Mozambican Non-Governmental Organisation, ADPP follows Mozambican generally accepted standards for policies and procedures, risk assessments and internal best practices.

Accounting is in accordance with Mozambican laws and International Auditing Standards.

Note: The accounts for the financial year 2022 here represented are preliminary
ADPP Mozambique received the SGS NGO Benchmarking Certification in 2020 (No: 198/NGO/02.12.2020) via an external audit as proof of its conformity and compliance with best practices in governance, measured against the SGS NGO Benchmarking Standards.
Partnerships are important to us. We work closely and collaboratively with the Government of Mozambique and other local and international partners to improve the living conditions of all Mozambicans.
